

* Cú pháp:

< Phạm Vi Truy Cap > abstract void < Tên Phương Thức > ();

VD: abstract void display ();

Bài 1:

```
abstract class Xe may may Xe may {  
    abstract void brake ();  
    public
```

Class Xe may the thao extends Xe may {

@Override

```
    public void brake () {  
        system.out.println ("Xe may Đang the thao dung  
        (ai);  
    }  
}
```

Class Xe may leo nui extends Xe may {

@Override

```
    public void brake () {  
        system.out.println ("Xe may leo nui dung lai"  
    }  
}
```

```
class Main {  
    public static void main (String[] args) {  
        Xe may the thao Xx1 = new Xe may the thao  
        Xe may leo nui Xx2 = new Xe may leo nui();  
        x1.brake();  
        x2.brake();  
    }  
}
```

Bài 2:

```
abstract class Shape {  
    abstract void draw();  
    String get color() {  
        return "Red"  
    }  
}
```

Class
