

Bài 2:

```
public abstract class Shape {  
    private String color = "Red";
```

```
    public Shape() {
```

```
    }
```

```
    public abstract void draw();
```

```
    public String getColor() {
```

```
        return color;  
    }
```

```
public class Rectangle extends Shape {
```

```
    @Override
```

```
    public void draw() {
```

```
        System.out.println("Draw" + super.getColor()  
            + " rectangle");  
    }
```

```
}
```

```
public class Circle extends Shape {  
    @Override  
    public void draw () {  
        System.out.println("Draw" + super.getColor  
            () + "Circle");  
    }  
}
```

```
ShapeApp  
public class Main {  
    public static void main (String [] args) {  
        Shape rect = new Rectangle ();  
        rect.draw ();  
        System.out.println(" - - - ");  
        Shape circle = new Circle ();  
        circle.draw ();  
    }  
}
```
