

Bài 1:

```
class HìnhHoc {  
    public void tínhDientich () {  
        System.out.println ("Tính diện tích hình học")  
    }  
}
```

```
public void class HìnhTròn extends HìnhHoc {  
    private double bankinh;
```

```
    public HìnhTròn (double bankinh) {  
        this.bankinh = bankinh;  
    }  
}
```

@Override

```
    public void tínhDientich () {  
        double dientich = Math.PI * Bankinh * Bankinh;  
        System.out.println ("Diện tích hình tròn: "  
                               + Dientich);  
    }  
}
```

```
public class HìnhTron extends HìnhHoc {  
    private int ch double chieuDai;  
    private double chieuRong;
```

```
    public HìnhChuKhát(double chieuDai double  
        chieuRong) {
```

```
        this.chieuDai = chieuDai;  
        this.chieuRong = chieuRong;
```

```
    }
```

~~@Override~~

```
    public void tinhDienTich() {
```

```
        double dientich = chieuDai * chieuRong;
```

```
        System.out.println("Dien tich HìnhChuKhát: " + Dien  
            Tich);
```

```
    }
```

```
public class Main Main() {
```

```
    public void static void main(String[] args) {
```

```
        HìnhHoc h1 = new HìnhTron(5);
```

```
        HìnhHoc h2 = new HìnhChuKhát(4, 6);
```

```
        h1.tinhDienTich();
```

```
} h2.tinh Dientich();
```

Bài 2:

```
Class Animal {  
    void makeSound() {  
        System.out.println("Dong vett keu");  
    }  
}
```

```
Class Dog extends Animal {  
    @Override  
    void makeSound() {  
        System.out.println("Un in");  
    }  
}
```

```
class Dog extends Animal {  
    @Override  
    void makeSound() {  
        System.out.println("Gau gau");  
    }  
}
```

```
class Cat extends Animal {  
    @Override  
    void makeSound() {  
        System.out.println("meow meow");  
    }  
}
```

```
class Chim extends Animal {  
    @Override  
    void makeSound() {  
        System.out.println("chip chip");  
    }  
}
```

```
public class Main () {  
    public static void main (String[] args) {  
        Animal a1 = new Pig ();  
        Animal a2 = new Dog ();  
        Animal a3 = new Cat ();  
        Animal a4 = new Chim ();  
        a1.makeSound ();  
        a2.makeSound ();  
        a3.makeSound ();  
        a4.makeSound ();  
    }  
}
```

Bài 3: Chúng ta đang tạo 2 lớp XeDap và XeDapDien. Lớp XeDapDien mở rộng lớp XeDap và ghi đè ~~phương thức~~ Phương thức ~~Run~~ run() của nó

```
Class XeDap {  
    void run() {  
        System.out.println("Xe dap chay bang sac  
                                nguoi");  
    }  
}
```

```
Class XeDapDien extends XeDap {  
    @Override  
    void run() {  
        System.out.println("Xe dap chay bang  
                                dien");  
    }  
}
```

```
public Class Main {  
    public static void main (String[] args) {  
        XeDap x1 = new XeDap();  
        XeDapDien x2 = new XeDapDien();  
    }  
}
```

```
x1.run();  
x2.run();  
}
```

Bài 4

```
Class Person {
```

```
    String name;
```

```
    Date birthday;
```

```
    void set
```

```
    void setName (String name) {
```

```
        this.name = name;  
    }
```

```
    void setBirthday (Date birthday) {
```

```
        this.birthday  
           birthday = birthday;  
    }
```

```
    String getDetails () {
```

```
        return "Name: " + name + ", Birthday: "  
              + birthday;  
    }
```

```
Class Employee extends Person {  
    double salary;
```

```
    void setSalary(double salary) {  
        this.salary = salary;  
    }  
}
```

@ Override

```
String getDetails () {  
    return super.getDetails () + ", Salary: " +  
}
```

```
Class Manger extends Employee {  
    Employee assistant;
```

```
    void setAssistant (Employee assistant) {  
        this.assistant = assistant;  
    }  
}
```

@ Override

~~String~~

```
String getDetails () {  
    return super.getDetails () + ", Assistant:"  
        + assistant.name;  
}
```

```
public class Main {  
    public static void main (String [] args) {
```

```
        Employee e = new Employee ();  
        e.setName ("Bang");  
        e.Salary setSalary (4000);
```

```
        Manager m = new Manager Manger ();  
        m.setName ("Huyen");  
        m.Salary setSalary (2000);  
        m.setAssistant (e);
```

```
        System.out.println (e.getDetail ());  
        System.out.println (m.getDetail ());  
    }
```

Bài 5:

```
Class Bank {  
    int getRate() {  
        return 0;  
    }  
}
```

```
Class SBI extends Bank {  
    @Override  
    int getRate() {  
        return 2;  
    }  
}
```

```
Class ICIC extends Bank {  
    @Override  
    int getRate() {  
        return 4;  
    }  
}
```

Class ~~AXIS~~ extends Bank {

@Override

int getRate() {

return 6;

}

public class Main {

public static void main (String[] args) {

Bank b1 = new SBI ();

Bank b2 = new ICIC ();

Bank b3 = new ~~AXIS~~ ();

System.out.println("SBI Rate: " + b1.getRate()
()+ "%");

System.out.println("ICIC Rate: " + b2.getRate()
()+ "%");

System.out.println("AXIS Rate: " + b3.getRate()
()+ "%");

}
